

Simply search, review, and add new providers directly into your Epic provider master file.

Every day, you receive referrals and external orders from providers who are not in your Epic EHR system and are outside of your medical staff. You may have some record of these providers, but not the data needed to feel confident that you'll be reimbursed and able to keep up with regulations like those in the 21st Century Cures Act.

Epic

Provider Validate offers Epic users

- Direct rapid access to provider profiles that feature the most current data from national and state resources, including NPI, OIG, SAM and state license boards
- The ability to easily add new, validated providers to your Epic provider master file

HOW IT WORKS

Provider Validate works with Epic and your team to install the application and map your data. Once installed, users can search and locate providers based on NPI number.

Requests for Referring and External Ordering Providers are confirmed with Provider Validate to provide an accurate, updated provider record for your Epic provider master file. You can also use Provider Validate to validate exclusions and current licensure.

Plus, Provider Validate supports sending patient and encounter level summary of care documents to providers for a more seamless transition of care, while helping your organization meet MIPS requirements.

If you're ready for:

Secure and Accurate Provider Data

Replace Provider on the Fly and all the headaches that come with it. Integrate Epic with Provider Validate – a comprehensive database of US physicians, nurse practitioners, physician assistants, and more that receives over 4 million updates per month.

Improved Processes and Interoperability

Provider Validate accommodates your organization's blueprint, reducing manual data entry. It enables better workflows for clinical communication, billing, referrals, and reporting, and helps improve your MIPS score with the deployment of direct addresses (and in the future, utilization of other endpoints, like FHIR addresses).

The Ability to Easily Handle Referring Providers

Accelerate turnaround time and reduce pain of gathering Referring Provider data with real-time access to verified data and the ability to easily add validated providers to your provider database.

You're ready for Provider Validate!
